-----

To achieve low latency, higher throughput, larger capacity, higher reliability, and wider connectivity, 5G base stations (gNodeB) need to be deployed in mmWave. Since mmWave base stations (gNodeB) ...

To tackle this issue, this paper proposes a synergetic planning framework for renewable energy generation (REG) and 5G BS allocation to support decarbonizing development of future PDS.

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for both ...

The research on 5G base station load forecasting technology can provide base station operators with a reasonable arrangement of energy supply guidance, and realize the energy saving ...

This study proposes a hybrid quantum-classical two-stage stochastic programming approach for the co-planning of BSs and PVs in urban communities.

Numerous studies have affirmed that the incorporation of distributed photovoltaic (PV) and energy storage systems (ESS) is an effective measure to reduce energy consumption from the ...

In this paper, a multi-objective interval collaborative planning method for virtual power plants and distribution networks is proposed. First, on the basis of in-depth analysis of the operating ...

Power capacity redundancy means designing a base station power system with an output capacity significantly higher than the maximum expected load. It also includes backup power ...

To understand the intricate world of mobile networks, it's crucial to grasp the role of base stations within the larger telecommunications network. These stations act as "business trackers," ...
