The Ivanpah Solar Electric Generating System is a concentrated solar thermal plant located in the Mojave Desert at the base of Clark Mountain in California, across the state line from Primm, Nevada.

OverviewDescriptionFossil fuel consumptionEconomic impactPerformanceEnvironmental impactsIn popular cultureExternal linksThe Ivanpah Solar Electric Generating System is a concentrated solar thermal plant located in the Mojave Desert at the base of Clark Mountain in California, across the state line from Primm, Nevada. It was slated to close in 2026, but that decision has been reversed by the California Public Utilities Commission. The facility derives its name from its proximity to Ivanpah, California, which lies within the Mojave National Preserve

This is exactly the case with Norway. The project of constructing buildings that generate all their own energy is called Project Powerhouse and was initiated in 2010 in Oslo, Norway.

One of the standout features of the Bullitt Center is its solar energy system. The building is equipped with a rooftop photovoltaic array that generates all the electricity needed for its operations.

This is exactly the case with Norway. The project of constructing ...

To see what a net zero world might look like in 2050, here are some of our favorite net zero buildings from the Architizer database. Net Zero Energy House by Klop Architecture, Cupertino, CA. This ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...

What if public art could also power an entire residential building? The SunRise Building, an apartment complex in Alberta, Canada, has answered that question -- and is now the title holder ...

What follows are the top 10 solar power plants that are actually operational and verifiably producing power as

A building that generates all solar power

of 2025. No speculative or half-built megaprojects and planned expansions. ...

The building is equipped with a rooftop photovoltaic array that generates all the electricity needed for its operations. This not only reduces the building's reliance on fossil fuels but also showcases the ...

Germany has designed the HelioTrove, a rotating building that generates 9,000 kWh without relying on any solar farms. This ingenious design could revolutionize the future of ...

With this in mind, we have selected 19 projects that address this matter and serve as examples to think increasingly about the concept of self-sufficient projects or, at least, projects with a...
