Are solar photovoltaic policies affecting China's solar industry development?

However, this growth has followed a very erratic path. This study identifies policies issued through this period for a closer look on the impact of these policies to the solar photovoltaic (SPV) industry development in China. This paper examines five stages in China's SPV policy from mid-1990s to 2019.

Do photovoltaic power generation policy synergies exist in China?

We quantitatively examine photovoltaic power generation policy synergies in China. This study expands the existing quantitative research on policy content analysis. China employs strong administrative power approaches, such as macro planning. Market-oriented approaches have not produced strong synergistic effects in China.

Why does China need a stable policy framework for solar PV market development?

The central government has placed significant emphasis on renewable energy, particularly solar PV technology. China's rapidly growing PV industry greatly benefited from the domestic supportive policies. Hence, maintaining stable policy framework and expectations is pivotal for market development.

Are photovoltaic power generation policies effective?

Existing qualitative research on photovoltaic power generation policies has preferred sorting, summarizing, and performing comparative analyses of policies, focusing on their effectiveness and efficiency. Meanwhile, policy synergies have been ignored when studying the effectiveness of photovoltaic power generation policies.

More recently, policies have evolved to prioritize regulatory refinement, subsidy reduction, and optimizing solar power consumption. These empirical insights underscore the pivotal role of ...

China's PV industry has developed rapidly in recent years, and the new installed capacity of PV power generation has been ranked first in the world for 5 years. This achievement is ...

This study identifies policies issued through this period for a closer look on the impact of these policies to the solar photovoltaic (SPV) industry development in China. This paper examines five stages in ...

Additionally, this study expands the existing quantitative research on policy content analysis. The results show that changes in the degree of synergy between policy goals and ...

Background China leads the world in deployment of solar power, with more than one-third of global capacity. China has led the world in solar power deployment every year since 2015. 46 In 2021, 53 ...

What policies are being introduced in the solar energy industry? A set of supportive policies have been introduced including the Feed-in Tariff Scheme, Photovoltaic Poverty Alleviation ...

Solar PV is turning into the lowest-cost choice for electrical energy generation in most of the world, which is expected to propel investment in the coming years. In fact, the development of ...

PDF | Solar photovoltaic, as a new type of energy, is a clean, efficient energy that China strongly encourages and supports to use. With the proposal of... | Find, read and cite all the research ...

More supportive policies to maximize solar power use and promote healthier photovoltaic development are in the pipeline, with sanguine forecasts of record growth in PV capacity this year, ...
