Is foam safe to use around food?

The report also says, however, that foam is safe to use around food; the danger lies with workers in industrial facilities that build items such as boats with styrene. The size of the container and the vegetables you're growing dictate how much foam to add to the pot.

Can expanded polystyrene foam boxes be used for gardening?

Loading... This blog looks at ways to convert expanded polystyrene foam boxes, a single use plastic used for packing vegetables, into a useful gardening asset. Most Australians call expanded polystyrene foam styrofoam, but this is a trademark name, owned by Dow Chemicals, who claim to have 'discovered' this product which was first made in Sweden.

Can vegetables be grown in a polystyrene box?

Polystyrene boxes are a good choice for growing vegetables because they are easy to manage and insulate. The foam helps insulate the roots. You can give your vegetables plenty of room to grow by using deep polystyrene boxes.

Do vegetable packing boxes contain flame retardant chemicals?

However, polystyrene vegetable packing boxes do not contain flame retardant chemicals because they are used for cartage, not insulation. Polystyrene is combustible and it produces thick, black smoke. So when your vegetable packing box reaches the end of its useful life in the garden, bin but do not burn it.
