On the Tibetan Plateau, nearly 10,000 feet high, solar panels stretch to the horizon and cover an area seven times the size of Manhattan. They soak up sunlight that is much brighter than at ...

Central Asia's balance of power is shifting as China exerts increasing influence by helping to develop green energy, putting Beijing in a position to supplant Moscow as provider of the region's power.

A massive open-sea solar plant is under construction in China, designed to power millions of homes and test how floating solar works at scale.

Deep in the Kubuqi desert in north China's Inner Mongolia Autonomous Region, rows of blue solar panels glisten under the winter sun, converting sunlight into electricity that flows into ...

A sea of solar panels stretches across the Kubuqi Desert in Inner Mongolia. China, the world's largest emitter of greenhouse gases, is rapidly expanding its wind and solar power capacity.

A Reuters review of various sites on the ground suggests that where many of Russia's most recent promises have fizzled, China has discreetly stepped up to fill the void, pushing ahead ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

This year, the milestone was achieved in June. That pace cements solar as the fastest-growing source of new electricity generation worldwide.

But China, the world's biggest emitter of greenhouse gases, will need to bring them down much more sharply to play its part in slowing global climate change.

China and Russia deepen solar power plant

China's solar power capacity is on course to surpass coal this year A sunset glow lights up wind turbines and rows of solar panels at a wind farm in Qingyang, Gansu province, China.
