In 2024, China's solar power generation capacity surged 45.2 percent to about 890 million kilowatts, while wind power generation capacity rose 18 percent to about 520 million kilowatts.

The nation put up 357 gigawatts of solar and wind, a 45% and 18% increase, respectively, over what was operating at the end of 2023, according to China's National Energy Administration. That's akin to building ...

China's solar and wind operating capacity has soared to 1.4 TW and now accounts for 44% of the world's operating utility-scale solar and wind capacity, more than the combined total of the European Union, United ...

In 2024 alone, China installed 360 gigawatts (GW) of wind and solar capacity. That's more than half of global additions that year, and it brings total installed capacity to 1.4 terawatts (TW) - that's roughly a ...

China broke its own renewable energy record once again in 2024, installing 80 gigawatts (GW) of wind capacity and 277 GW of solar capacity, according to the National Energy Administration, as reported by Recharge ...

"Since 2013, the country's wind power installed capacity has grown sixfold, while solar power installed capacity has surged more than 180 times. Its annual new installations account for more than 40 ...

China's installed capacity shot up by 14.6% last year, now surpassing 3,348 gigawatts (GW). Solar saw the biggest leap, with a record-breaking 45.2% increase (+277 GW), achieving 887 GW...

China's wind and solar power installed capacity totaled 1,840 GW at the end of 2025, according to data released by the National Energy Administration yesterday.

Installed solar and wind power capacity climbed 45.2% and 18%, respectively, in 2024, the National Energy Administration said on Tuesday.

China s wind and solar power installed capacity

In CY2024, China hit a new record of annual net new capacity added to the grid at 429GW, a 21% y-o-y increase. Of this, wind and solar power combined capacity accounted for 83% at 356.5GW, dwarfing the 4% ...
