-----  
How does energy storage work in the Dominican Republic?

By adding energy storage instead of utilizing existing thermal power plants to maintain frequency, the Dominican grid operator can enable the power plants on the island to run at their most efficient generating level while the battery systems absorb and discharge energy on the grid as needed.

What is AES Dominicana doing with a DPP Advancion energy storage array?

AES Dominicana is using its Andres and Los Mina DPP Advancion energy storage arrays to provide fast, accurate frequency control to the Dominican grid, balancing second-to-second variations between electricity consumed and produced.

What did AES do in the Dominican Republic?

ARLINGTON, Va., October 17, 2017 - AES Dominicana announced that it brought online 20 megawatts (MW) of new battery-based energy storage arrays at two sites in the Dominican Republic, which played a key role in maintaining grid reliability in September when Hurricanes Irma and Maria struck the island.

How did Hurricane Irma & Maria affect the Dominican power grid?

Both energy storage arrays performed more than double the amount of work during the storms as normal, helping keep the Dominican grid operating during category 3 and 4 hurricane conditions, even as nearly 40 and 55 percent of the island's power plants were forced offline during Hurricanes Irma and Maria, respectively.
