-----  
What is the new EU Battery regulation?

With the new EU Battery Regulation (EU 2023/1542), which will take full effect from 2027, the playing field is changing dramatically. The regulation not only sets higher requirements for the production and recycling of batteries, but also imposes new obligations for transport and packaging.

What does the EU Battery regulation mean for packaging & transport?

The EU Battery Regulation shows that from 2027 packaging and transport are no longer just operational preconditions, but strategic links in compliance, sustainability and cost control. This is precisely where Faes' strength lies. As a Fourth Party Packaging (4PP) partner, we take on the complete management and direction of packaging.

What does the EU Battery regulation 2023/1542 mean for packaging & transport?

The message is clear: the EU Battery Regulation (2023/1542) makes packaging and transport no longer operational peripheral issues, but crucial links in compliance, sustainability and strategic supply chain management. The EU Battery Regulation (EU 2023/1542) will be introduced incrementally, but 2027 represents the real tipping point.

What is the EU Battery regulation 2027?

The EU Battery Regulation (EU 2023/1542) will be introduced incrementally, but 2027 represents the real tipping point. From that year, provisions will apply that directly affect not only producers, but also logistics and packaging processes. The four main milestones are summarized below.

The battery pack is the most valuable component of the electric vehicle and its disassembly is the key process to recover the inner value of the product and apply circular economy ...

Projections around battery manufacturing in the EU remain highly uncertain. Many reports claim that the EU is on track to meet its future battery needs, yet also highlight significant ...

Discover how the EU Battery Regulation will impact battery manufacturers, importers, and the entire supply chain.

Learn how the EU Battery Regulation 2027 reshapes lithium battery transport and packaging. Discover key

rules on safety, traceability, and sustainability.

Critically for battery designers, the EU regulations do not state anything about the internal structure of the battery pack (module structure, cell separators, adhesives, etc.).

The new EU regulations cover the entire life cycle of a battery from the mined materials through to their recycling at end of life. To lessen the impact of initial manufacturing, there are ...

**OVERVIEW** Batteries are a crucial element in the EU's transition to a climate-neutral economy. On 10 December 2020, the European Commission presented a proposal designed to ...

The EU Battery Regulation 2023/1542 sets a unified legal framework for all batteries placed on the EU market, with a strong focus on lithium battery packs used in medical, robotics, ...

EU rules on batteries aim to make batteries sustainable throughout their entire life cycle - from the sourcing of materials to their collection, recycling and repurposing. In the current energy ...

**Abstract** The latest status and near-future trends of automotive battery packs are presented and discussed, with a focus on automakers. Desired pack specifications, aligned with ...
