How to install a solar power system?

When you install your Solar Power system, try to position your photovoltaic panels directly under the noontime sun for maximum efficiency from your photovoltaic unit. Before Installation, take care of any obstructions to sunlight. Remove all unnecessary obstructions and items such as branches that may block sunlight to your solar unit.

Where should a solar panel be installed?

It is very important to install your solar panel at location that gets the most direct sun exposure. Solar Panels perform at optimum capacity when placed in direct sunlight. When you install your Solar Power system, try to position your photovoltaic panels directly under the noontime sun for maximum efficiency from your photovoltaic unit.

What is a solar panel angle calculator?

Solar panel angle calculators can help you determine the best tilt for your location and the orientation of your roof. Homeowners must select the right mount system type (roof or ground) for their solar panels. Roof-mounted solar panels are the most common choice for residential installations in the United States.

How do you activate a solar system after installation?

After solar panel installation, the system needs to be activated. This involves interconnecting the solar panels, installing the inverter, and commissioning the system. During this step, note that as long as the solar panels are receiving sunlight, they have an open circuit voltage. Be careful when handling them.
