Is electricity growing in El Salvador?

Despite these notable achievements in clean electricity, El Salvador has seen a decline in overall electricity consumption to 1125 kWh per person in 2024, compared to its previous record of 1240 kWh per person in 2021.

Why should El Salvador invest in solar energy?

By capitalizing on its geographical advantages for solar energy, El Salvador can increase its clean electricity supply, aligning with environmental goals and global energy trends.

How can El Salvador boost low-carbon electricity generation?

To boost low-carbon electricity generation further, El Salvador can significantly benefit from expanding its solar energy infrastructure, which is already playing a vital role in the electrical landscape.

What is the history of low-carbon electricity in El Salvador?

Reflecting on the history of low-carbon electricity in El Salvador, there have been varied developments over the decades. The late 1970s and 1980s saw fluctuations in hydropower, with a notable increase by 0.4 TWh in 1979, followed by a slight decrease in the early 1980s.

See our explainer on the different metrics used to measure energy for more information. How much energy does El Salvador consume each year? How much total energy -- combining electricity, ...

NOTE: This time series graph shows the Electricity Consumption of El Salvador based on our stored data from 2004 to 2024, taken from the CIA World fact books of the respective years.

Electricity generation and consumption, imports and exports, nuclear, renewable and non-renewable (fossil fuels) energy, hydroelectric, geothermal, wind, solar energy, etc. in El Salvador.

The National Energy Policy to 2024 of El Salvador guides the national actions on energy, following main principles: ensure high quality level and continuous and affordable energy access, ...

El Salvador's electricity mix includes 26% Hydropower, 25% Gas and 18% Geothermal. Low-carbon generation reached a record high in 2024.

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each ...

Electric power consumption (kWh per capita) - El Salvador from The World Bank: Data

Energy budget, consumption and production capacities in El Salvador, including a comparison with the USA. CO₂ emissions, share of renewable energies

El Salvador: Electricity consumption, billion kilowatthours: The latest value from 2023 is 6.34 billion kilowatthours, a decline from 6.47 billion kilowatthours in 2022. In comparison, the world average is ...

Official and up-to-date data of El Salvador for all years of statistics, in an easy-to-read format. Analysis of electricity consumption with advanced tools for comparisons, trends, shares, and various metrics.
