Solar power was the European Union's largest source of electricity for the first time in June, overtaking nuclear and wind while coal's contribution fell to an all-time low, data from energy...

Solar panel installations in Europe have declined for the first time since 2016, raising fresh concerns about the continent's ability to meet its 2030 targets, according to SolarPower Europe.

At some times in spring, as much as 60 per cent of Spain's electricity comes from the sun. That has enabled Spain to slash its use of gas and coal-fired power stations. Consumers have ...

There has been little light relief for European manufacturers of solar panels over the past few years. A glut of cheap Chinese solar panels triggered a flurry of factory closures,...

BRUSSELS/BERLIN, July 24 (Reuters) - The European Union's expansion of solar energy is on track for its first annual slowdown in more than a decade, industry data showed on Thursday, as some...

In 2025, on current predictions, the EU is set to install 64.2 GW, a decrease from 65.1 GW in 2024. The new installations do help to deliver the European Commission's 2025 solar target of 400 ...

With solar panels and wind turbines installed in more places--while energy storage capacity is still lagging--an especially sunny and windy day can generate more electricity than is ...

Europe is on track to achieve record solar power generation in 2025, with significant increases in solar energy's share of the electricity mix across multiple countries.

According to SolarPower Europe 's mid-year analysis, the EU added a substantial volume of solar capacity in the first half of the year, driven by favourable policy frameworks, declining ...

Europe cancels solar panel power generation

Solar is set to become the largest green energy source globally, the question now for Europe is whether it can revamp its grid fast enough to prevent another dramatic blackout.
