Can flexible solar panels be installed on a fiberglass roof?

Flexible panels can be installed directly onto fiberglass or aluminum roofs using adhesive backing or minimal fasteners. For those considering a complete home solar solution, our residential solar panels offer similar efficiency benefits for permanent installations. Typical installations:

What are flexible solar panels?

These panels use either thin-film technologies like CIGS (Copper Indium Gallium Selenide) or ultra-thin monocrystalline silicon cells embedded in flexible substrates. The key advantage of flexible panels lies in their adaptability.

Can solar energy be used on a rooftop?

As more businesses and property owners embrace solar energy, finding ways to optimize available space has become essential. However, many rooftops aren't built to support traditional solar panels due to structural constraints. Apollo Power provides an innovative solution, making solar energy accessible even for challenging locations like:

Are flexible solar panels a good choice for your building?

Conventional glass modules require a minimum load capacity of 15 kg per square meter for installation. However, many buildings do not meet this requirement, necessitating costly and time-consuming structural reinforcement, which disrupts normal operations. Flexible solar panels are an ideal solution to this problem.
