-----

In the early 2000s, Germany encouraged people to install solar panels on the roofs of their homes by rewarding them with payments, known as feed-in tariffs, for sending energy to the grid.

In southern Germany, a turquoise gravel lake has quietly become a power plant. Instead of building a classic solar farm on fields or rooftops, engineers have covered part of the water with long ...

Demand for photovoltaic panels in Germany boomed in the wake of Russia's full-scale invasion of Ukraine in 2022, as consumers confronted with soaring energy bills turned to solar power.

From breaker masking to voltage mismatches, America's grid isn't ready for balcony solar--yet.

The German government enacted the first technical regulations for plug-in solar devices in 2019, allowing balcony solar systems to use standard electrical plugs and feed into the grid. That ...

More than 500,000 plug-in solar systems have been installed in Germany, most of them taking up a seamless spot on people's balconies.

A pair of dark blue solar panels hanging from a railing, plugged directly into a wall outlet, is an increasingly common sight. This trend, known as balkonkraftwerk or "balcony power plant," has ...

Germany's balcony solar panel boom continues unfettered, as the total number of installed units surpasses one million. The panels are inexpensive to install and save homeowners and tenants ...

Though sunnier regions elsewhere have the potential to generate far more electricity, in Germany falling prices, improved technology and political support have helped drive a solar balcony ...

The solar sector can expect support from individual consumers in the coming years: Nearly every third house owner in Germany (29%) plans to install a solar power system in the coming two years, ...
