---

In 2015, this policy shifted focus from net metering to net billing which allows customers with renewable energy systems to offset their electricity bills by selling excess energy back to the grid.

New utility-scale solar fields, community microgrids, and rooftop solar adoption have surged across St. John's, Five Islands, All Saints, and rural parishes. Government data confirms ...

The modeled, optimal mix of renewable energy technologies presented here was found for Antigua and Barbuda by assessing the levelized cost of electricity (LCOE) for systems comprising ...

The data and information that are available in the ERC were mostly provided by the government ministries, agencies, and departments, that have responsibility for statistics and planning, in general, ...

Search all the ongoing (work-in-progress) GUSESS projects, bids, RFPs, ICBs, tenders, government contracts, and awards in Antigua and Barbuda with our comprehensive online database.

The pipeline of utility-scale and large commercial segments for battery storage in the UK is continually increasing, with a pipeline of over 16GW of projects with the potential for deployment over the next ...

Developing Antigua and Barbuda's abundant renewable energy resources will enable the country to meet a large share of its energy demand sustainably with renewables, according to a new report ...

The project includes an 800kW diesel power plant and a 720kWh hybrid solar power plant, as well as an 863kWh battery system to store excess electricity generated.

Thus, this study aims to demonstrate that CSP is a renewable energy technology that can help assist Antigua and Barbuda in its transition to a renewable energy electric grid while also...

The present study describes the development and application of a model of the national electricity system for the Caribbean dual-island nation of Antigua and Barbuda to investigate the cost-optimal...
