---

Used wind turbine blades have been designated hazardous waste and no one knows how to deal with them. Currently 30,000 wind turbines are in operation across Germany and many ...

Ultimately, whether wind turbine blades are "bad" for the environment depends on how effectively we address their disposal and recycling, and continuously improve their design and ...

Wind turbine blades are subject to extreme environmental conditions, including high wind speeds, rain, ice, and UV exposure. The leading edge of a blade is particularly vulnerable to erosion due to the ...

We have documented the threats of industrial wind turbines to both soil and water in their pre and post-construction phases, not to mention birds, bats, insects, and humans. But not enough ...

Seeking information on living near wind turbines. CLAIM: FACT: Wind turbine blades are emitting large amounts of bisphenol (BPA) and microplastics into their surrounding environments. Wind turbine ...

Discover whether wind turbines are harmful to the environment or misunderstood. Learn about wind energy's real impacts on wildlife, land use, noise, and recycling, and why its benefits ...

Far less wind power would be built if subsidies, credits and mandates were removed. Politicians need to reconsider support for environmentally damaging, unreliable wind power.

A study by the US National Renewable Energy Laboratory of US wind farms built between 2000 and 2009 found that, on average, 1.1 percent of the total wind farm area suffered surface disturbance, ...

Con 1: Wind power is unreliable.

The researchers estimated that current annual amounts of metals shed from blades at operating European

offshore wind facilities to be high enough that, when taken up by seaweed and ...
