This study provides an inspection of the hydrogen technologies that range from the ways to produce hydrogen from renewable energy sources to their different storage alternatives.

In Colombia's Hydrogen Roadmap published in 2021, the Government projects hydrogen demand to increase exponentially by 2050, owing to new applications of "low-carbon hydrogen" ...

A Hydrogen Roadmap published by the Colombian government will pave the next 30 years (until 2050) for the development, generation and use of hydrogen as a cleaner energy vector ...

Companies active and interested in the development of green hydrogen production and consumption projects are, among others, OPEX, EPM, Celsia. The Manizales hub intends to cover a limited local ...

In the presentations below, you will discover why all of these factors make Colombia the ideal location for your next project.

In September 2021, the 30-year Hydrogen Roadmap for Colombia was launched; its implementation will require a significant public-private investment effort for the development of low-emission hydrogen ...

As an energy vector, hydrogen will accelerate the deployment of Non-Conventional Renewable Energy Sources (FNCER for its Spanish acronym), such as solar and wind energy, through seasonal energy ...

Advances in hydrogen storage and transportation are improving its viability as a clean energy solution. Colombia is well-positioned to lead these developments within the region.

Colombia, with its abundant renewable resources, is poised as a potential player in hydrogen production. This study presents a techno-economic assessment of hydrogen pathways and ...
