How to install AP antenna?

Deploy the LAN cable from indoor to outdoor location of AP installation. The LAN cable should follow 568B standard, and use the network cable tester to test. The height of mounting pole should be 1.5M above the roof, the antenna of AP should face to the base station and in good alignment to make sure signal strength is the best.

How do you install an outdoor access point?

The Process of Outdoor Access Point Installation Use a marker pen to mark the location of the installation holes on the wall. Use an impact drill to drill holes in the wall according to the marked positions. Use a hammer to tap the expansion bolts vertically into the hole. Fix the bracket on the wall with four M6 screws.

Should you install outdoor access points?

By deploying these access points, you can reduce costs on infrastructure and wiring installations. However, outdoor access point installation comes with its own set of challenges. The access points must be highly resistant to dust and water, typically needing an IP rating of at least IP65 to avoid permanent damage from water intrusion.

How do you install a AP on a wall?

Use a marker pen to mark the location of the installation holes on the wall. Use an impact drill to drill holes in the wall according to the marked positions. Use a hammer to tap the expansion bolts vertically into the hole. Fix the bracket on the wall with four M6 screws. Fix the host bracket components on the back of the AP with four M5 screws.
