How has solar energy generating capacity grown since 2009?

Nature 598,604-610 (2021) Cite this article Photovoltaic (PV) solar energy generating capacity has grown by 41 per cent per yearsince 2009 1. Energy system projections that mitigate climate change and aid universal energy access show a nearly ten-fold increase in PV solar energy generating capacity by 2040 2,3.

How has solar energy generating capacity changed over the years?

Provided by the Springer Nature SharedIt content-sharing initiative Photovoltaic (PV) solar energy generating capacity has grown by 41 per cent per yearsince 20091. Energy system projections that mitigate climate change and aid universal energy access show a nearly ten-fold increase in PV solar energy generating capacity by 20402,3.

How much solar capacity did the world add in 2025?

In the first six months of 2025,the world added 380 GWof new solar capacity -- 64% higher than during the same period in 2024,when 232 GW were installed. In 2024,it took until September for global solar capacity additions to surpass 350 GW,while in 2025,the milestone was reached in June.

How many gigawatts of solar power are there in China?

Only in that last year,installations increased by almost 40 percent. In 2024,cumulative solar PV capacity reached some 886 gigawattsin China alone. Investments in solar photovoltaic energy have grown during the last years and the technology stands out as the most heavily funded renewable energy source.

The most relevant aspects of the installed capacity by autonomous communities in 2024 include: Andalusia is the second autonomous community in terms of installed capacity from ...

Solar energy is a rapidly growing business in India. As of March 31, 2019, the country"s solar installed capacity was 28.18 GW. The Indian government set a goal of 20 GW of capacity by ...

World installed 380 GW of new solar capacity in first six months of 2025 Global solar installations are on track for another record year. In the first six months of 2025, the world added 380 ...

We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power

Installed capacity of solar power generation system

grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory ...

The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2025 provides datasets ...

Why Installed Capacity Matters for the Grid The measurement of installed capacity is a key input for long-term electrical grid planning and modernization. System operators use this metric ...

Cumulative installed solar capacity, measured in gigawatts (GW).

Energy system projections that mitigate climate change and aid universal energy access show a nearly ten-fold increase in PV solar energy generating capacity by 2040^{2,3}.

Globally, renewable power capacity is projected to increase almost 4 600 GW between 2025 and 2030 - double the deployment of the previous five years (2019-2024). Growth in utility-scale and ...

Solar photovoltaics is one of the most cost-effective technologies for electricity generation and therefore its use is growing rapidly across the globe. Global solar photovoltaic ...
