Solar panels are built to work in all climates, but in some cases, rooftops may not be suitable for solar systems due to age or tree cover. If there are trees near your home that create excessive shade on ...

It describes trends in solar-adopter household income, race and ethnicity, rurality, education levels, occupation, age, home value, housing type and tenure, and prevalence within ...

A majority of US households can reduce energy costs and access affordable backup power during outages through rooftop solar and battery storage.

Community solar is an accessible and equitable way to draw your energy from the sun when a rooftop solar panel system isn't available to you, which makes it perfect for Gen Z renters.

Rooftop solar is growing, but is not yet part of the mainstream in most of the country. Only about 3 percent of households have solar, a share that rises to 5 percent if we're only looking at...

Solar and Gen Z really are a match made in heaven! Ultimately, solar is the beacon of hope amongst current climate change issues. Gen Z are encouraging the movement that will help us ...

Millennial homeowners are almost six times more likely to own solar panels than baby boomers and three times more likely than Generation X homeowners.

Solar energy is particularly interesting in this respect as it has the potential to be used at commercial as well as household level; however, to this end, its contribution to global energy supply ...

Installing home solar panels is a way for individuals to not only make an eco-friendly decision but also save money on electricity bills. Solar seems like the best of both worlds for young adults, but is the ...
