Can a grid operator charge a construction cost subsidy for battery storage?

Against the decision of a grid operator to charge a construction cost subsidy for the connection of a battery storage system based on the capacity price model, a storage system operator recently took legal action.

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

What is grid-scale battery storage?

Battery storage is a technology that enables power system operators and utilities to store energy for later use.

What challenges does grid-scale energy storage face?

Grid-scale energy storage faces several technical and economic challenges: Cost and Economic Viability: High initial capital costs and ongoing maintenance can be prohibitive. Some technologies also rely on materials like lithium and cobalt, which have fluctuating prices and limited availability.
