-----

It proposes an Energy Management System (EMS) based on using adaptive controls and predictive analysis to optimize the charging and discharging strategies of BESS, thereby improving system ...

To achieve fast charging and discharging, improve energy utilization efficiency, and promote environmental friendliness, this paper proposes a novel battery hybrid power storage ...

Among various technologies, the lithium-ion battery stands out due to its high energy density, long cycle life, and environmental friendliness, making it a cornerstone for modern energy ...

The study establishes a comprehensive approach to enhance energy storage performance by developing a dual-stage model that achieves superior multi-objective control for ...

In this paper, the energy management and scheduling algorithm of lithium battery energy storage system (ESS) based on artificial intelligence (AI) is studied, aiming at improving the energy ...

An improved particle swarm optimization-least squares support vector machine-unscented Kalman filtering algorithm on SOC Estimation of lithium-ion battery. Int. J. Green.

In this paper, a probabilistic prediction algorithm for the cycle life of energy storage in lithium batteries is proposed. The LS-SVR prediction model was trained by a Bayesian three-layer ...

This study proposes a hybrid framework that combines a physics-based multiphysics model, machine-learning surrogate models, and a multi-objective optimization algorithm to guide the ...

To improve accuracy, various factors such as temperature and internal resistance were considered. The algorithm was validated through hardware and simulation experiments, with ...
