What are the legal requirements to install solar PV systems?

The legal requirements to install solar pv systems: A solar installation must be done by a company (or person) who is registered as an electrical contractor with the Department of Employment and Labour, and who must be registered as a Registered Person in the category of Installation Electrician (IE) or Master Installation Electrician (MIE).

What are the regulations for installing solar panels on your property?

Arguably, the most important regulations for those looking to install solar panels on their property are those that consider the placement or positioning of the solar panels. These vary depending on whether your property is for commercial or domestic purposes.

Can I install solar panels if I don't meet building regulations?

Your local authority can also apply for a Confiscation Order to take away any money you've earned with your system - so there's absolutely no benefit to installing solar panels that don't meet building regulations. It's crucial that your solar installation follows all building regulations.

Do solar panels need to be labelled and tested?

In addition, solar panels must be correctly labelled, documented, and tested. This guide explains how requirements from regulations and directives, such as the General Product Safety Regulation and the Low Voltage Directive, apply to solar panels sold in the European Union.

To be fully certain that your solar panels are safely wired, the installers themselves must also be compliant with multiple regulations. Anyone installing solar panels must follow the MCS ...

Learn when solar panel permits are required, costs, timelines, and state-specific requirements. Complete guide to solar permitting process and exceptions.
