This page describes the patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact project development.

Legislation proposed in Illinois aims to establish the state's energy-storage mandate and implement a virtual power plant (VPP) program to help optimize the power grid and flatten peak ...

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal.

The report says many existing power plants that are being shut down can be converted to useful energy storage facilities by replacing their fossil fuel boilers with thermal storage and new ...

-- Today the Solar Energy Industries Association (SEIA) is unveiling a new policy agenda that details the critical actions that local, state, and federal leaders must take to strengthen the ...

A policy primer exploring how energy storage technologies work, the benefits that storage can deliver to the electric grid, the current legal and regulatory barriers to adoption, and policy ...

CEG provides information, technical guidance, policy and regulatory design support, and independent analysis to help break down the barriers to energy storage deployment and advance the ...

The goal of this guide is to reduce the cost and improve the effectiveness of operations and maintenance (O&M) for photovoltaic (PV) systems and combined PV and energy storage systems.

Battery energy storage systems are rechargeable batteries that store generated energy either from a generation source or the grid itself. They are "reversible" as resources to the grid, meaning that they ...

Photovoltaic power station and energy storage policy

The Department of Energy's (DOE) Energy Storage Strategy and Roadmap (SRM) represents a significantly expanded strategic revision on the original ESGC 2020 Roadmap.
