The RCT Power Storage DC is a clever inverter with battery connection to enable private consumption of the solar energy you have generated with your photovoltaic installation. It distributes solar power ...

The RCT Power Switch all-pole disconnects the domestic network from the mains supply. It then creates a stand-alone grid in combination with the DC-connected RCT Power storage system.

Featuring 2 MPPT and 2 string inputs, the Power Storage DC 6.0 inverter is equipped to handle an array of solar panel configurations, allowing for maximum power generation under any condition.

The RCT Power Storage DC is a 3-phase hybrid inverter (4-10 kW) for new PV systems, featuring a high-voltage battery connection, two MPP trackers, and only 6 W standby consumption.

With a RCT Power storage systems you store your solar power locally and use it whenever you need it. Controlling energy costs and safeguarding you from power outages.

Three independent MPP-trackers Input for high voltage battery Suitable for dynamic power adjustment Intelligent energy storage management with forecast based charging Exact and fast control behaviour

Thanks to the integrated high-voltage battery connection and two MPP trackers, a flexible battery storage system can be set up with the RCT Power Storage DC. It can be easily transported to the ...

Measurement results according to efficiency guidelines for RCT Power Storage 6.0 with RCT Power Battery 11.5

Paired with any solar module, the RCT Power Storage DC US 8.0 provides you with your own clean energy and recharges the RCT Power Battery in an efficient way. The integrated RCT Power Switch ...
