-----

In addition to the regulatory support of carbon tax initiatives, the vessels would need fast charging and energy storage infrastructure in ports on each side of a set route to enable a harbour ...

Sweden's ship design and management player Wallenius Marine and Danish naval architect company Knud E. Hansen have presented a brand-new design concept for a roll-on/roll-off ...

Swedish shipping firm Stena Line has unveiled a RoRo vessel design concept, which can reduce the vessel's energy usage by 20% or more.

Elaborate a concept for a hydrogen-electric powertrain for one of the RoRo ferries operating on the Esbjerg-Immingham-Esbjerg route, including the dimensioning of all major components, such as the ...

A novel approach is demonstrated for the layout of solar arrays within a Ro-Ro type marine vessel navigated between Pendik/Turkey and Trieste/Italy during 2018, and the performance ...

Corvus Energy, the leading supplier of batteries for hybrid and zero-emission vessels, is proud to introduce its next generation Energy Storage System (ESS): Corvus Blue Whale, a ...

Over the past decade, Corvus has provided battery energy storage systems for over 150 ferries around the world. This includes all-electric, hybrid and plug-in hybrid passenger, Ro-Pax, Ro-Ro, and high ...

Electrical and wind propulsion, together with energy stored in batteries and renewable energies harnessed onboard, can lead the way towards zero-emission ships. This study compares wind ...
