Hypocausts were used for heating hot baths and other public buildings in ancient Rome. They were also used in private homes.

The hypocaust - the Roman system of underfloor heating - may be less staggering in its scale, but it remains one of the most recognisable features of Roman domestic life. Archaeologists ...

One of the most advanced and fascinating technologies of that era was the hypocaust--a centralized heating system used primarily in public baths and wealthy Roman homes.

In short, a hypocaust was an underfloor heating system that circulated hot air beneath the floors and sometimes even through the walls of Roman buildings. This wasn't just for elite palaces-- ...

Caldarium from the Roman Baths at Bath, in Britain. The floor has been removed to reveal the empty spaces through which the hot air would flow. Hypocausts were used for heating hot baths and other ...

Beneath the impressive structures of Roman architecture lay an equally extraordinary innovation: the hypocaust heating system. This underfloor design transformed how the Romans ...

The hypocaust system (hypocaustum in Latin) was a heating system used in wealthy Roman homes and Roman baths, and was the closest equivalent to modern central heating. The ...

This type of heating was developed by the Romans, who used it not only in the warm and hot rooms of the baths but also almost universally in private houses in the northern provinces. Many examples of ...

This type of heating was developed by the Romans, who used it not only ...

The researchers found that Roman engineers had installed an underfloor heating system in the house. Known as a "hypocaust" these heat manufacturing and distribution devices were ...

Roman underfloor heating system

Even today, the concept of underfloor heating, which utilizes radiant heat, can be traced back to the Roman hypocaust. In conclusion, the Roman hypocaust stands as a testament to the ingenuity and ...
