The ERP Series is a fully-integrated DC power system designed for telecom sites and data centers, featuring a high-efficiency ECM rectifier, ERM solar converter, and advanced monitoring.

Engineered for efficiency and flexibility, these cabinets are ideal for telecom base stations, smart energy networks, and industrial control sites, where both power and communication systems must operate ...

They feature a wide range of power inputs, intelligent battery management, and remote monitoring capabilities. Also compatible with EPS inverter systems, providing high efficiency, high reliability, and ...

They transform solar-sourced DC into AC and store unused energy in high-performance battery packs, providing clean, renewable backup energy to mission-critical telecom equipment.

One cabinet per site is sufficient thanks to ultra-high energy density and efficiency. The eMIMO architecture supports multiple input (grid, PV, genset) and output (12/24/48/57 V DC, 24/36/220 V ...

Whether for remote telecom stations, solar hybrid systems, or industrial automation units, we provide fully assembled cabinets with integrated power, cooling, and control systems for plug-and-play ...

The traditional DC systems connect battery pack and run with float charging mode. The new DC system run with silicon controlled rectifying power supply for battery.

The product is fully digitally designed with high reliability, high power density and high performance. The system adopts modular design and supports hot-swappable online maintenance.

Combining solar power, energy storage, and communication power in telecom cabinets boosts reliability and

Solar telecom integrated cabinet communication high voltage dc power supply

cuts energy costs. Proper sizing of solar panels and batteries ensures stable ...
