What is the future of batteries in Sweden?

In the commercial sector, battery capacity is also set to grow, with installations on industrial sites expected to collectively surpass 1,000 MW by the end of 2024, compared to around 100 MW at the end of 2023. The number of batteries pre-qualified to deliver support services to the Swedish power grid rose substantially from 40 MW to 80 MW in 2023.

What role does battery storage play in Sweden's energy infrastructure?

This increase underscores the growing role of battery storage systems in stabilising and supporting Sweden's energy infrastructure. Swedish Solar Energy launched version 1.1 of its fire protection guideline for stationary battery storage systems on October 29, 2024.

Can a stationary battery storage system be installed in Sweden?

Svensk Solenergi has shared new guidelines for installing stationary battery storage systems. Its publication comes as the number of battery installations in Sweden, across both the residential and larger-scale markets, is accelerating.

Do companies outside Sweden have EPR for batteries?

Companies outside Sweden selling directly to end users in Sweden also have EPR for batteries. Many EPR requirements changed on August 18, 2025. The electrification of society is important for quickly reducing greenhouse gas emissions and limiting temperature increases.

The Battery Regulation also contains other rules, including requirements regarding sustainability, safety, labelling and other information requirements. The Swedish Chemicals Agency ...
