This article aims to provide an in-depth introduction to the IEC 62196 Type 2 connector, its specifications, applications, and the impact it has on the EV charging industry.

A Type 2 connector is a European Commission standard EV charging connector, also known as "Mennekes," capable of delivering up to 300 amps of current at 480 volts.

Configuration FF is colloquially known as the "CCS2 connector" or "Combo2 connector", because it is used within the Combined Charging System and extends the Type 2 coupler.

The functional capabilities of the SAE J1772 Type 1/2 EV charging interface. How the Combined Charging System (CCS) specification adds dc fast-charge capabilities to the J1772 system.

The Type 2 connector was adopted as the EU standard in 2013, with full compliance required by 2025. The connector was chosen by the EU to promote electric mobility and ensure interoperability ...

The IEC 62196 Type 2 connector (often referred to as Mennekes for the company that designed it) is used for charging electric vehicles, mainly within Europe, as it was declared standard by the EU.

Type 2 is an AC charging connector that supports both single-phase and three-phase AC charging. It is part of the European IEC 62196-2 standard and has been designated by the European ...

The Type 2 connector, commonly known as the Mennekes connector, is the standard AC charging interface for electric vehicles (EVs) in Europe, designed to support both single-phase and three ...

Unlike Type 1 connectors, the Type 2 connector, also known as IEC 62196 or Mennekes connector, is prevalent in Europe and is becoming more adopted globally. It features seven pins, ...
