Could solar power be the backbone of Ukraine's energy system?

The war against Ukraine has led to massive destruction of the energy infrastructure. One consequence of this is blackouts in cities. In the future, renewables such as wind and solar power could form the backbone of Ukraine's electricity system. (Image: Oleksii Maznychenko /Adobe Stock)

Could renewables be the backbone of Ukraine's electricity system?

In the future, renewables such as wind and solar power could form the backbone of Ukraine's electricity system. (Image: Oleksii Maznychenko /Adobe Stock) In their study, the researchers explain why renewables should take centre stage in the reconstruction of the Ukrainian electricity system.

Can solar power help prevent corruption in Ukraine?

They have determined that solar and wind energy would quickly deliver a distributed power supply system and prevent corruption. The war against Ukraine has led to massive destruction of the energy infrastructure. One consequence of this is blackouts in cities.

Does Ukraine have a solar power plant?

Ukraine's annual solar energy volume is higher than that of Germany, one of the industry leaders. From 2018 to 2020, solar energy capacity increased nearly fivefold. As of 2024, solar power plants account for about 75% of "green" energy production in Ukraine (excluding large hydropower plants).

The power system of mainland Ukraine, excluding Crimea, featured a generation capacity of 59 GW as of February 2022. 49% of the capacity was operated on fossil fuels, i.e., coal and/or ...

The third is speed. Solar power is the quickest and cheapest way to deploy electricity generation. In the face of sudden attacks, solar can quickly fill some gaps in the electricity system. ...

Wind power plays a significant role in the growing decentralisation of Ukraine's energy system, and in times of significant stress on the national grid infrastructure, it could strengthen ...
