-----

The U.S. Energy Information Administration predicts solar energy will be the leading force behind this year's growth in the electric power industry.

We expect that solar electricity generation supplied to the grid managed by the Electric Reliability Council of Texas (ERCOT) will grow from 56 BkWh in 2025 to 106 BkWh by 2027. Increasing ...

In September, 98% of new electric generating capacity in the United States came from solar, marking 25 consecutive months where solar led other energy sources.

Use WeatherPower graphics to show daily wind and solar electricity generation based on weather of the day and installed capacity in your area.

Solar power Solar and wind power has grown faster than electricity demand this year, report says A new analysis of solar and wind power shows its generation worldwide has outpaced electricity demand this year.

Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity expansion. Low module costs, relatively efficient permitting processes and ...

The share of utility-scale solar in the U.S. power generation mix will grow from 5% in 2024 to 7% in 2025 and to 8% in 2026, the U.S. Energy Information Administration (EIA) projected in its...

Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects rapid growth in the sector, with global solar ...

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion kilowatthours (kWh) in 2023 to 286 billion kWh in 2025. We expect ...

Installed U.S. power capacity is forecast to grow 57% by 2050, with three eras: rapid solar energy growth

# Whether solar power generation

(2025-2035), coal replacement (2035-2040) and steady nuclear expansion (2040-2050).
